

# **ARDEX X10**

## Flexible Non Slump Wall and Floor Tile Adhesive

Flexible - achieves S1 classification

Non slump - ideal for large format and heavy tiles

Extended open time

Good workability with low sand content

Ideal for all tile types including fully vitrified, porcelain and mosaics

Suitable for wall and floor tiling

For internal and external use

Low VOC content - meets Green Building Council of Australia Green Star IEQ - 13 requirements

ARDEX Singapore Pte Ltd 26 Tuas Ave 4 Singapore 639376 Ph: +65 6861 7700 Fax: + 65 6862 3381 Email: sales@ardex.com.sg Website: www.ardex.com.sg

## **ARDEX X10**

### Flexible Non Slump Wall and Floor Tile Adhesive

#### DESCRIPTION

ARDEX X10 is a white polymer fortified cement-based wall and floor tile adhesive that has been specially formulated with mastic type properties. ARDEX X10 has an extended open time, is non slump and flexible. Mix with water to achieve a mortar suitable for internal and external use in residential and light commercial applications. ARDEX X10 meets the Green Building Council of Australia Green Star IEQ-13 requirements for Ceramic Tile Adhesives.

#### FOR FIXING (TILE TYPES)

Fully vitrified and ceramic tiles, porcelain, natural stones (excluding moisture sensitive) and mosaics.

#### **TO (SUBSTRATES)**

Concrete, renders, screeds Fibre-cement sheet, (e.g Villaboard) on walls Plasterboard Compressed fibre-cement sheet on floors ARDEX liquid applied undertile waterproofing membranes Existing ceramic tiles (internal dry areas)

#### SURFACE PREPARATION

The surface being adhered to must be clean, firm and free of dust, dirt, oil, grease, curing compounds, release agents and other barrier materials, as well as being strong enough to support the weight of the tiles being fixed. Ensure surfaces are dry before tiling, with no residue or permanent damp.

Ensure that the substrate's required drying time, as given in the relevant part of AS 3958, is allowed to elapse prior to fixing the tiles. Prime porous substrates with ARDEX Multiprime.

#### CONCRETE

This includes precast, in-situ and wood floated concrete. As concrete exhibits drying shrinkage, allow to cure for at least 4 weeks prior to tiling. Any surface laitance, concrete sealers, curing compounds, and other materials should be removed from the surface prior to tiling. Steel trowel finished concrete should be roughened mechanically to remove laitance and provide a good key for tiling. The surface should be true and level and pitched to drains where required. The concrete should have adequate surface profile (e.g. broom finish) to provide a mechanical key. Smooth surfaces and/or dense concrete greater than 35MPa must be mechanically prepared prior to tiling.

#### **CEMENT RENDER/SCREEDS**

New renders and screeds should be finished with a wood float to the required surface regularity. Screeds should be pitched to drains where required. Allow at least 7 days to cure prior to tiling.

## PLASTERBOARD/MEDIUM DENSITY FIBRE-CEMENT SHEET

Tiles can be fixed directly provided these boards are firmly and rigidly fixed in accordance with manufacturer's instructions to adequately support the tile bed. Priming is recommended for fibre-cement sheet but is not usually necessary for plasterboard except when jointing compound is used.

## COMPRESSED FIBRE-CEMENT SHEET INTERNAL APPLICATIONS

These sheets must be fixed strictly in accordance with manufacturer's instructions and be deemed suitable for the application by the manufacturer.

Tiling over compressed fibre-cement sheet for external flooring applications should be carried out as per sheet manufacturer's recommendations and Australian Standard AS 3958.

#### ARDEX LIQUID APPLIED UNDERTILE WATERPROOFING MEMBRANES

ARDEX undertile waterproofing must be applied according to instructions and thoroughly dry prior to tiling.

#### EXISTING CERAMIC TILES (INTERNAL ONLY)

These include sound, clean, glazed and unglazed tiles. Existing tiles must be firm and stable. Roughen the surface by mechanical means, clean off contamination and dust before tiling. Ensure that at least 80% of the glaze is removed. Tiling over existing tiles is not recommended in immersed applications.

#### MIXING

ARDEX X10 powder is added to clean water in a large clean container whilst stirring vigorously with a paddle mixer. Mix thoroughly to give a lump free easily worked mortar of a thick creamy consistency. Mix for at least 2 minutes allow to stand for 2 minutes, and mix a second time for 2 minutes. A 25kg bag of ARDEX X10 requires approximately 7.5 - 8 litres of water.

The consistency of the adhesive can be slightly adjusted to suit site conditions and size, weight and type of tiles to be fixed. Do not apply at temperatures below 5°C. The pot life of the mixed mortar is approximately 3 hours at 23°C and 50% relative humidity

#### **FIXING TECHNIQUE**

Before fixing ensure the substrate has been prepared and the tiles are free from dust. Tiles should be fixed in accordance with Australian Standard AS 3958.

Substrate surface, type and size of the tiles will determine the selection of the trowel. As a general guide use a  $6 \times 6 \times 6$ mm notch trowel for walls and  $10 \times 10 \times 10$  mm notch trowel for floor tiling. ARDEX X10 can be applied at a bed thickness greater than 3mm or less than 10mm.

The tiles must be pressed firmly into the freshly combed mortar bed to ensure good contact with the mortar. Slide the tile at right angles to the notch pattern to ensure 100% coverage on the back of the tile. Tiles with ribbed or keyed back profiles should also be buttered to ensure complete coverage. Lift a tile from time to time to check that there are no voids beneath the tile. Do not spot fix. Any surplus adhesive must be removed from the surface of the tile and joints, before the adhesive sets.

ARDEX X10 has an open time of 30 minutes and an adjustment time of 20 minutes. Please be aware of site conditions when considering these times and only spread enough adhesive so that the tiles can be fixed while the mortar is still wet. All tools should be cleaned with water immediately after use.

#### **MOVEMENT JOINTS**

Movement joints must be in accordance with Australian Standard AS 3958.

#### GROUTING

Grouting can proceed once the tile bed has hardened sufficiently so that tiles will not be dislodged. Grouting and traffic may be allowed after approximately 24 hours at 23°C and 50% relative humidity. Allow longer for dense tiles/substrates, humid climates and low temperatures.

The tile joints should be grouted with the appropriate ARDEX grout.

#### COVERAGE

25kg of ARDEX X10 is sufficient for approximately  $9m^2$  on walls, using a 6 x 6 x 6mm notched trowel and  $7m^2$  on floors using a 10 x 10 x 10mm notched trowel. The coverage will vary depending on substrate condition, tile type and application technique.

#### PACKAGING

ARDEX X10 is packed in polylined paper sacks – net weight 25kg.

#### SHELF LIFE

ARDEX X10 has a shelf life of not less than 12 months when stored in the original unopened packaging, in a dry place at 23°C and 50% relative humidity.

#### **PAY ATTENTION TO THE FOLLOWING:**

Do not use ARDEX X10 in continuous immersion applications e.g. swimming pools, tanks, etc. ARDEX provides other systems. Do not use over metal or similar substrates. ARDEX X10 should not be used over substrates subject to shrinkage and other movement e.g. timber, ARDEX provides other systems.

For setting of moisture sensitive natural stones, please refer to products in the ARDEX Natural Stone System. Dimensional instability in natural stone ranges is often difficult to detect visually and may require thermal and moisture stability testing to ensure that adhesive recommendations can be warranted. Contact your tile supplier for further information or ARDEX technical services for information and testing.

#### SAFETY PRECAUTIONS

This product is considered non hazardous in normal usage. The presence of cement in the product gives an alkaline mortar which may cause some irritation if prolonged contact with skin takes place.

Avoid contact with skin and eyes; in case of contact with the eyes, rinse immediately with plenty of water and seek medical advice; wear suitable gloves and eye protection and keep the product out of the reach of children. Avoid generation of airborne dust during mixing. If swallowed do not induce vomiting, give a glass of water and contact a doctor.

For further material safety data, consult the latest Material Safety Data Sheet.
